PRIVATE COLLECTION / ENGLISH

Active Atacama

A five-day program combining hiking and e-biking, with a gradual progression toward higher mountain terrain. The final objective is the Láscar Volcano, subject to proper acclimatization, an assessment of the group, and official access authorization.

Your journey, step by step

Day 1 · Morning and afternoon

Morning trekking in Catarpe, with the canyon and viewpoint on the chosen route. After a lunch break, visit Termas Puritama. The agreed Valle de los Cactus acclimatization stop is a complement, with no separate service added.

Day 2 · E-bike Cornisas

Bike adjustment and practice, followed by the reserved route and safe viewpoint stops. Distance and elevation gain refer to the confirmed cycling circuit, not the former Cornisas walking route.

Day 3 · Machuca-Río Grande Trek

A point-to-point hike with pickup at the end. The chosen route determines the distance; allow for trail food, breaks and transfers.

Day 4 · Morning

The standard El Tatio visit, breakfast and return. This is not the discontinued altiplano hiking experience.

Day 5 · Láscar Volcano

An ascent only if access, conditions and acclimatization allow. Agree a technical route and return plan, with an alternative if the ascent cannot take place.

One evening · Skapada Cosmic

Schedule the Solor session around sky conditions and recovery, preserving the rest needed before the mountain outing.

DURATION

5 days

DISTANCE / ROUTE

Distances vary based on the chosen routes

EFFORT

Pace and altitude adjusted to the group

MEALS

Snacks and meals are provided according to the specific requirements of each activity. Breakfast at El Tatio and refreshments during the astronomy session. Note that bicycle support, water, and mountain snacks are included in the proposal.

TRANSPORT

Pick-up and drop-off at your accommodation are provided daily. Airport transfers and accommodation are included only if explicitly stated in the proposal.

PREPARATION

Assess your trekking and cycling experience. The program does not guarantee sufficient acclimatization within five days, nor does it guarantee reaching the summit of the Láscar volcano.
