PRIVATE EXPERIENCE / ENGLISH

Skapada Cosmic

In the ayllu (community) of Solor, the night invites you to pause and look at things from a different perspective. Over the course of two hours, Skapada Cosmic combines naked-eye stargazing, guided observation using 16- and 20-inch Dobson telescopes, and a break to enjoy a warm drink beneath the southern sky.

Your itinerary

Letting the sky reveal itself

We begin by giving your eyes time to adapt to the darkness. Your guide will help you identify directions, constellations, and key reference points in the Southern Hemisphere, connecting what you see to the scale and apparent motion of the sky.

Looking through the telescope

We take turns using the instruments to observe objects visible that night. The guide explains how to focus and what details to look for-such as light contrasts, star clusters, nebulae, or planets, depending on their position. The specific objects viewed may vary from one date to another.

Conversation and sharing

There is time for questions and for revisiting objects that spark particular curiosity. The session includes hot drinks, wine, and light snacks; please share any dietary preferences when making your reservation.

Preserving the night

We conclude with one last look at the sky, followed by instructions for the return journey. Night photography can be arranged upon request, subject to availability and conditions; it is not automatically included as part of the session.

DURATION

2 hours

DISTANCE / ROUTE

At the Solor observatory

EFFORT

A relaxed outdoor activity

MEALS

Hot beverages, wine, and appetizers are included, as confirmed by Ernesto.

TRANSPORT

The meeting point and any necessary transfers are arranged based on your accommodation. The experience takes place in Solor, San Pedro de Atacama.

PREPARATION

Please dress warmly-the nights are cold. We have extra mountain gear available for those who need it. The specific celestial objects visible and the execution of the activity depend on sky conditions.
